(54) Title: **SENSOR ARRANGEMENTS, SYSTEMS AND METHOD IN RELATION TO AUTOMATIC DOOR OPENERS**

(57) Abstract: A sensor arrangement controls opening and closing of a door device. The sensor arrangement is arranged to be mounted in the vicinity of the door device. The sensor arrangement comprises an image-acquiring means, which monitors and acquires images of a field of view that encompasses at least an approach area located adjacent said door device, and a movement detector, which is arranged to process the acquired images in order to detect a movement, which is to result in an opening of the door device and said field of view in order to identify at least one event according to predetermined criteria, wherein the event generator in response to an identification of an event creates a recording of the event. An event-based system for managing a plurality of sensor arrangements is also provided.
